

# MANISHANKAR M

Phone: +91 9994211395 | Email: [manishankar.m2023ece@sece.ac.in](mailto:manishankar.m2023ece@sece.ac.in) | [Linkedin](#) | [Github](#)

## EDUCATION

|                                             |           |            |             |
|---------------------------------------------|-----------|------------|-------------|
| Sri Eshwar College of Engineering           | B.E (ECE) | CGPA: 8.26 | 2023 - 2027 |
| Govt Hr Sec School Senjerimalaiyadipalayam  | HSC       | 90.17%     | 2021 - 2023 |
| Thavathiru Marimuthu Adigalar Matric School | SSLC      | PASS       | 2020 - 2021 |

## INTERNSHIPS

|                                                                                                                                                                                                                  |      |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| <b>RV Tech Learn - MERN</b>                                                                                                                                                                                      | 2025 |
| Designed and developed dynamic web applications using MERN stack, emphasizing real-time data handling and user-centric design, with hands-on internship experience in full-stack development and cloud services. |      |
| <b>Embedded Systems - Artiwiz Technologies</b>                                                                                                                                                                   | 2025 |
| Gained hands-on experience with STM32 (ARM Cortex-M) and 8051 microcontrollers, specializing in PWM, I2C, SPI, and assembly programming for timers, interrupts, and serial communication.                        |      |

## PROJECTS

|                                                                                                                                                                                                             |      |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| <b>Real-Time Weather Monitor</b>                                                                                                                                                                            | 2024 |
| IoT-based system that fetches real-time weather data via API and displays temperature, humidity, and other parameters on an LCD.                                                                            |      |
| <b>IoT-Based Milk Spoilage Analyzer with Predictive Shelf-Life Estimation</b>                                                                                                                               | 2025 |
| Developed an IoT-based milk spoilage analyzer using ESP32 with pH, gas, and temperature sensors to monitor milk quality in real time. Used machine learning to classify freshness and predict shelf life    |      |
| <b>Smart Home Automation System</b>                                                                                                                                                                         | 2025 |
| Designed a comprehensive smart home automation system with web dashboard, Alexa and Telegram controls, featuring automated lighting, gas leak detection, motion sensing, with manual override capabilities. |      |
| <b>Tech stack :</b> Embedded Systems and IOT, Arduino IDE                                                                                                                                                   |      |
| <b>Multi-Factor Smart Security System</b>                                                                                                                                                                   | 2025 |
| Developed a multi-factor smart security system integrating face recognition, voice commands, QR code, PIN, password, and OTP authentication for enhanced security and convenience.                          |      |
| <b>Tech stack :</b> Embedded Systems and IOT, Arduino IDE, Python, OpenCV                                                                                                                                   |      |

## CERTIFICATIONS

|                                                                                  |      |
|----------------------------------------------------------------------------------|------|
| Debugging Techniques for Serial Communications (I2C/SPI/UART)   <b>Microchip</b> | 2025 |
| Introduction To Programming In C   <b>Nptel</b>                                  | 2024 |
| The Joy of Computing using Python   <b>Nptel</b>                                 | 2024 |
| Mastering Data Structures & Algorithm using C & C++   <b>Udemy</b>               | 2024 |
| SQL Certifications from HackerRank   <b>HackerRank</b>                           | 2024 |

## ACHIEVEMENTS

**Ninjacart Agritech Hackathon** – Selected among the top 15 teams out of 300 across India for agritech innovation  
**Codelee** - 3<sup>rd</sup> place in class level for solving problems in global platform leetcode contest  
**Leetcode** : Solved 100+ problems | Ranking :1,270,809  
**Publication** : AI-Powered Sound Energy Harvesting System-**IEEE**

## SKILLS

**Languages** – C | Python | Java(Basic) | HTML | CSS | Embedded C.  
**Core** - Data Structures and Algorithms | Embedded Systems and IOT  
**IDE** –VS Code | Aurduino IDE | STM32CubeIDE | MATLAB | KEIL | Eclipse  
**Tools** - Canva | GitHub | COLAB
